

# **PROJECT ENGINEER (DETAILER)**

## **RETAIL ENVIRONMENTS**

### **FULL TIME | VAUGHAN, ON**

**Technical Drive. Detail. Create. Deliver.**  
**Develop engineering plans and solutions for brands that embrace artistic freedom across the retail world.**

Our client is a leading manufacturer of retail and custom environments located in the GTA. This organization is known in the industry for their commitment to quality and delivery. Their portfolio includes leading brands across Canada.

The company takes pride in developing innovative spaces with the ability to blend multi-materials in a creative fashion that produces unique environments. At their core, they are experts in millwork, metal, glass and acrylic production.

While consistently exceeding client expectations, they have achieved tremendous success and continue to experience growth. As a result, they are looking to add a diligent and dedicated Project Engineer to their team.

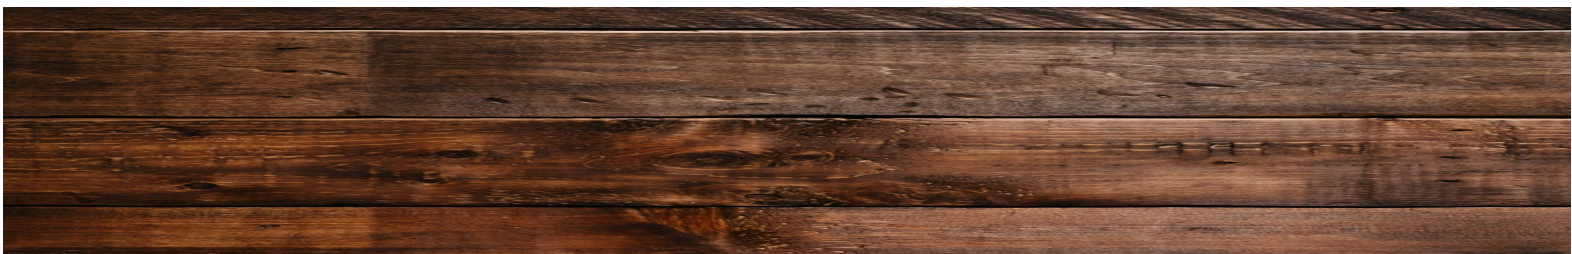

This is an amazing opportunity for a creative and technically driven individual with a client-centric focus on creative solutions.

#### **The Role Overview:**

The Project Engineering role consists of a unique balance between creativity, detail and strong technical knowledge. The Project Engineer cultivates a technical spirit with an emphasis on customer service and ingenuity. The PE leads as an expert in ensuring the communication, development, and translation of all details for the company's projects.

#### **The Key Focus:**

- Accountable for the preparation of fixture drawings for customer approval and detail fabrication information and design through the use of AutoCAD

- Produces fixture drawing specifications for customer review based on the prescribed design using the company engineering/drawing standards
- Incorporates engineered, efficient, best practice design/production methods in the design/detail drawing process
- Reviews all drawings and specifications with Engineering Manager and Project Managers
- Product development - source and develop information & details for efficient production resulting in excellent quality
- Interacts with production to assure design/production flow
- Creates Bills of Materials for all manufactured products and input into ERP manufacturing system
- Maintains/updates all revisions to B.O.M's
- Prepares of all required detail drawings, cut lists, and laser programs for accurate production job flow
- Creates work orders for production based on accurate Bill of Materials

**Qualifications & Skillset:**

- University degree and/or diploma in Design, Engineering in architectural sciences, millwork and/or related fields
- Excited to be in the manufacturing environment, with a desire to lead with a hands-on approach
- Highly knowledgeable of 3D software programs (AutoCAD preferred)
- Strong design skills: ideation, sketching, and concept generation
- General understanding of manufacturing processes (knowledge of metal and wood finishing an asset)
- Strong team player with a positive attitude
- Highly organized and able to prioritize daily tasks

This is a once in a lifetime opportunity for the right Project Engineer. Our client has set the mandate to shape the future with limitless boundaries.
